

CPR Editorial Memorandum:
**The REINS Act: The Conservative Push to Undercut Regulatory Protections for
Health, Safety, and the Environment**

By Sidney Shapiro
Member Scholar, Center for Progressive Reform
Professor, Wake Forest University School of Law

Overview: Undercutting the Regulatory System

Congressional Republicans' campaign "Pledge to America" included a number of familiar and thoroughly poll-tested planks of the traditional GOP platform. But one new and sweeping proposal in the document was a call for something called "[The REINS Act](#)" (H.R. 3765 sponsored by Rep. Geoff Davis (R-KY), S. 3826 sponsored by Sen. Jim DeMint (R-SC)). Under the legislation, no new "economically significant" regulations would take effect unless affirmatively approved by Congress, by means of a joint congressional resolution of approval, signed by the President. Since the election, House Republicans have made clear they intend to move such a bill in the new Congress. The proposal is a genuinely radical departure, plainly designed to gum up the regulatory works. Its inclusion in the "Pledge" reflects an escalation in the conservative attack on health, safety, and environmental protections, one that has played out in recent months on the op-ed pages of newspapers across the land.

Currently, federal agencies draft regulations following through on specific statutory mandates included in laws passed by Congress and signed by the President. Congress has adopted this system because it recognizes the necessity of assigning the job of crafting appropriate regulations to the scientific, economic, legal, and other experts in agencies. For example, it is far beyond Congress's ability to determine exactly how lead paint should be removed in residential buildings; scientists and other experts at the EPA develop those regulations, following the mandates Congress has passed.

Congress also adopts this system because agencies are better insulated from the political process than Congress. Although agencies are subject to political influence, they must also have legal justifications for their actions. When agency rules are appealed, the federal courts ensure that regulations are backed up by reasonable policy justifications and are consistent with the statutes passed by Congress.

The REINS Act would instead make Congress the final arbiter of all significant regulatory decisions. While superficially this may seem like a good idea – after all, Members of Congress are elected and regulators are not – the REINS Act would replace what is good about agency rulemaking with what is bad about the legislative process. Neither Members of Congress nor their staffs are likely to have sufficient expertise regarding complex regulations. And, unlike agencies, Congress does not have to have good policy reasons for refusing to approve a regulation. Instead, the approval process is likely to be nakedly political, reflecting the raw political power of special interests and the large campaign donations that they give.

Finally, but hardly least of all, the legislation stacks Congress's procedural deck against approval of regulations. Since the bill does not clearly prohibit a filibuster in the Senate, it would empower a few, or even one Senator, to block regulations. Moreover, under the terms of the bill, Congress has only a 90-day window to approve a regulation, and if both houses fails to do so during that time period, the

regulation is deemed to have been rejected, and Congress is barred from subsequently voting to approve the regulation or one “substantially similar” to it for the remainder of that Congress. The 90-day requirement is a particularly high hurdle indeed in the United States Senate, a body where even legislation popular on both sides of the aisle can easily bog down.

The bill has been embraced by presumptive Speaker of the House John Boehner, who earlier [called](#) for a halt to all new federal regulations. As of mid-December 2010, the bill had 83 cosponsors in the House, and 13 in the Senate. It is supported by the U.S. Chamber of Commerce, FreedomWorks, and the American Conservative Union.

At least for now, the proposal, like other provisions in the Pledge to America, is more rhetoric than reality. The bill is currently supported only by conservative Members of Congress, and would not get past an Obama veto. But its inclusion in the platform today suggests a larger and longer attack on regulation somewhere down the road.

The REINS Act: A Gift to Regulated Industries

The REINS Act is a bad idea for several reasons:

- 1) *The regulatory system allows Congress to chart a policy course, and delegates the task of implementation and enforcement to the Executive Branch, consistent with the Framers’ intention that Congress and the President would pass laws that the Executive Branch would then administer.*** The current system of administrative agencies of the federal government began more than 100 years ago, and matured through the 20th century. It was codified in its present form in the Administrative Procedures Act (passed in 1946 and later amended). Congress passes laws with instructions for the administrative agencies to issue specific regulations that become the rule of the land.
- 2) *Congress already has the power to stop regulations if extreme circumstances dictate.*** The Congressional Review Act (1996) requires agencies to submit new final rules to Congress for review, delaying the effective date of those rules to permit Congress to block them, and establishes a fast-track process for legislation proposed to overrule a regulation. Disapproval legislation must pass both houses and be signed by the President. Congress has only used this authority once, in 2001, to overrule an OSHA ergonomics rule.
- 3) *The proposal would make the rulemaking process significantly more political in nature than it already is, giving industry lobbyists an even stronger hand.*** The current regulatory system is intended to ensure that new regulations are the product of each agency's expertise. And the courts act as a check on that: A company or individual or other affected entity can sue to challenge a regulation that does not conform to the laws passed by Congress. The REINS Act would turn this system on its head, opening the door for pure politics to operate even in situations where science indicates that the public is endangered. Corporate lobbyists could ensure that no regulation ever saw the light of day by funneling hundreds of thousands of dollars to legislators who oppose regulations of interest to their clients. In a post-*Citizens United* world, there is no limitation on the amount of money that corporations could spend to defeat legislators who will not do their bidding.

Would regulations we take for granted today have been put into place under these circumstances? Probably not. For example, while 40 years ago rivers and streams were often filled with toxic pollutants, today many more are clean. That's thanks to regulations EPA implemented under the Clean Water Act. At the time, industry representatives claimed that the cost of instituting pollution controls would

destroy their businesses, predictions that nearly always proved grossly exaggerated. Despite these pleas, EPA instituted pollution limits to achieve the mandates of the Clean Water Act. It is difficult to see that happening if the REINS Act had been in place, because polluting industries would have far more leverage over rulemaking than they already do.

4) *The bill would make it virtually impossible for an approval resolution to pass because it does not clearly prohibit a filibuster.* There are two possibilities for a filibuster in the Senate. A filibuster on the motion to take up a matter, and after the Senate agrees to this motion, a filibuster on the motion itself. While the proposed bill clearly limits the second possibility, it does not clearly limit the first. The legislation limits to not more than 10 hours “*debate on the joint resolution, and on all debatable motions and appeals in connection therewith,*” raising the question whether the motion to take up the joint resolution is a motion “in connection therewith” within the scope of the 10-hour limitation. Since the legislation leaves the matter unclear, the Senate could interpret it not to prohibit a filibuster on a motion to take up the joint resolution.

5) *The bill’s 90-day requirement would make it extraordinarily difficult for Congress to approve regulations, even those that were universally popular.* The United States Senate is known for many things; its ability to move legislation quickly is not one of them. The REINS Act requirement that a joint resolution of approval be passed within 90 days would make it all too easy for a determined minority of senators to block an approval resolution simply by employing the wide array of delaying tactics available to individual members of the Senate. Then, after 90 days had passed without an approval vote, not only would the Congress be prohibited from reviving the regulation by means of a joint resolution, it would be prohibited from voting on a subsequent regulation that was “substantially similar” for the remainder of that Congress.

6) *The regulatory process is accountable even though regulators are not elected.* Agencies develop regulations to implement laws passed by Congress, soliciting comment from affected parties and the public. Drafts of those regulatory proposals are commonly vetted by the White House Office of Information and Regulatory Affairs (OIRA), which has often served as an additional venue for industry to dilute or block needed regulations. Once agencies issue final regulations, Congress has a fast-track opportunity to block them, and Members of Congress can, and usually do, lobby the agency. Thus, under current law, by the time a regulation is finally adopted, two and usually all three branches of government have weighed in, giving advocates on all sides of the relevant issues ample opportunity to affect the outcome.

7) *The regulatory process is not out of control.* Conservative rhetoric about “job-killing” regulations is a fabrication, a reiteration of the same doomsday rhetoric that conservatives have used to oppose virtually every major step forward for health, safety, and the environment. The REINS Act is an attempt by conservatives to appeal to the public by attacking a straw man, while giving industry allies an additional opportunity to kill regulations it finds inconvenient.
